Cairo, Egypt · +20 127 363 9988 · [mina-andajos-work@outlook.com](mailto:mina-andajos-work@outlook.com) · [github.com/mina-atef-00](https://github.com/mina-atef-00) · [mina-atef.duckdns.org](https://mina-atef.duckdns.org)

## EXPERIENCE

---

### Full Stack Engineer / Systems Administrator — [Outreachy](#) (remote) · March – August 2022

Paid open-source internship; selected from ~50 candidates.

- Rebuilt the backend of a public harvest-management platform ([saskatoon-ng](#)) as a documented REST API — pagination, filtering, ordering, search and a DRF browsable API — replacing ad-hoc page views with one query layer.
- Cut page load time by up to 160× on key pages by profiling the ORM and removing N+1 queries in the serializers. ([PR #169](#), [PR #339](#))
- Built several user-facing pages end to end — a statistics page for all harvests, property comments, fruit-field images — UI and backend. ([PR #159](#), [PR #345](#))
- Built, hosted and documented the entire production Debian stack from scratch: uWSGI, NGINX, MySQL with automatic backups, fail2ban, firewall and HTTPS.

### Freelance Python Developer (self-employed, remote) · 2021 – 2022

Contract work.

- Built three production Discord bots against third-party APIs: [QuickFlips](#) finds underpriced eBay listings through below-average-price, misspelled-query and ending-soon searches; [Infinity-Team](#) runs Axie Infinity team operations — onboarding, Ronin wallet QR binding, an expiry/review loop and warn/fire moderation; [ProBotX](#) is a moderation suite with logging, ModMail and anonymous confessions.

### Programming Instructor (volunteer) · 2018 – 2019

- Taught Python, C, Arduino and Raspberry Pi to youth groups at church activities.

## PROJECTS

---

- [docpipe](#). Turns a directory of docs into hashed chunks in a SQLite index with term, vector and hybrid search — plus a verify gate that refuses to ship rows it cannot trace to a file on disk — also bundled as a Hermes plugin. (Python with Typer/FastAPI, SQLite with sqlite-vec, PyMuPDF, pytest)
- [langpipe](#). Turns word lists and grammar points into study plans: practice cards, spaced-repetition scheduling and honest retention numbers — also bundled as a Hermes plugin. (Python with Typer/Pydantic)
- [book-man](#). Dyslexia-friendly study companion: PDF/EPUB into Markdown, then into a structured, queryable wiki. (TypeScript, OpenCode plugin API, MinerU, MCP)
- [agent-skills](#). 12 first-hand skills for coding agents — Fedora Atomic ops, PDF tooling, browser automation, editor integration — published on ClawHub. (executable Markdown procedures)
- [mina-fedora-atomic](#). Immutable OS images with Fedora bootc — atomic upgrades with instant rollback, Containerfile-built and signed so every machine runs the identical image, desktop or server. (bootc, Containerfile, Just, cosign, Podman/Docker)
- [nix-mina](#). Whole-system configuration as a Nix flake — every package, service and desktop setting versioned in one repo and reproducible from a fresh install. (Nix flakes, MangoWC)
- [QuickFlips](#). Discord bot that hunts underpriced eBay listings three ways: below-average-price search, deliberately misspelled queries that surface listings other buyers never find, and ending-soon auctions — sorted low to high with category and country filters. (Python, eBay APIs)
- [ProBotX](#). Full Discord moderation suite: join/exit handling with role assignment, logging of avatars, nicknames and message edits/deletes, ban/kick/mute/purge commands, a ModMail bridge, and anonymous confessions with hashed IDs so abusers can be blocked without breaking anonymity — warned/muted users in MongoDB. (Python, MongoDB, OpenWeatherMap/Unsplash APIs)
- [Infinity-Team](#). Axie Infinity team management: auto-onboarding with role assignment, QR codes binding players' Ronin wallets on-chain, an expiry/review loop with manager alerts, and warn/fire/approve moderation including a quarantine channel for fired players. (Python, web3.py/Ronin, SQLite)

## SKILLS

---

Python, SQLite and SQL, MCP servers, Hermes agent, Ollama / OpenAI-compatible endpoints, Nix, Linux (Fedora Atomic / bootc, Debian), Podman/Docker, Bash, Git, pytest, Django REST Framework, Flask/FastAPI, SQLAlchemy, PostgreSQL, MongoDB, cron automation.

## EDUCATION & CREDENTIALS

---

**B.A. Business Administration** — Ain Shams University, Cairo (2023 – 2026)

Communication Engineering coursework — Ain Shams University (2018 – 2022)

[AWS Certified Cloud Practitioner](#) (credential J0Z5WZZKR2F11195)

Languages: English (fluent) · Arabic (native)
